### **Ford F850 Front Grille Guard - Athearn Model**

This Grille Guard is designed to be used on the Ford F850 model produced by Athearn. You will need to drill two #77 holes in the front bumper to add this to the model. It may be easier to drill these holes if you are able to carefully and safely remove the bumper. If not, the following information should still work as intended.

On lower edge of the fret holding the grille guard you will notice three real small tabs on the inside edge and two holes on the long bar they are attached to. If you bend these tabs down 90 degrees and place them against the back side of the bumper, it should position the holes in the bar centered vertically on the bumper. Center horizontally and mark/drill holes into the bumper (all the way through if from the bottom).

Paint the grille guard the color of your choice and allow to dry. Remove guard from fret retaining mounting pins on guard. Insert mounting pins into drilled holes and glue in place.

We would like to suggest our #13873 Ford F850 Mirror and detail set for this model.

Thank you for using our product to dress up your model. Please see your local hobby supplier of all of our photo etch detail products or visit us online.

Drill template holes

3 centering tabs bend down 90 degrees, rest against backside of bumper to center mounting drill holes vertically on bumper
