GP7/9 Intake Shutters Set - Proto2000 model**

These brass intake shutters are designed to be used along with our #14860 Intake screens on the Proto2000 GP7's and GP9's models. They will need the openings to be .200" tall and .350" wide (1.075" and .710" if you open the whole area.) There is a left hand and right hand to these shutters. Please read through these instructions first to become familiar with them and what we are trying to accomplish. Additional photos and information can be found on our web page at www.planomodelproducts.com/14861/14861.html

You will notice that the frame around the shutters is half etched while the shutters are full thickness. These frames will be folded together to give a full thickness frame once everything is bent and folded together.

First bend half of the shutters up to almost 90 degrees. This is up in the direction of the half etch area. The other half of the shutters will be bent down in the opposite direction about 90 degrees.

There is a divider line in the frames between the two groups of shutters. Fold in half at this line. As the two halves come together you will notice how the shutters slide between each other. The positioning tabs should also line up.

Firmly press the halves together at the hinge points. Once together, all of the inter lock tabs should be all lined up and everything should look like one solid piece. A small dab of

CA glue between the halves should keep them together. The shutters mount to the inside surface of the shell. The larger horizontal surface (the fold line side) will be the bottom mounting surface. Once installed, the shutters can be positioned from the outside, before the screens are installed. If screens are already installed, do some test fits to see how you want your shutters positioned before gluing in place. The shutters can be modeled open, closed or any position.

This completes this part of your Geep detailing project. Touch up paint if needed. We thank you for using our product on your model. Please see your local hobby supplier for all of our photo etch details or visit us online.
